Re: 2022 Ag Calculations

Date: April 7, 2022

This spreadsheet includes details about local agricultural economic conditions and the methodology prescribed in the Texas Property Tax Code or the Texas Comptroller's Property Tax Assistance Division's Ag Appraisal Manual. Ag value calculations are based on a five year average excluding the immediate past year, therefore the 2022 calculation is based on years 2016 through 2020. All calculations are based on a "CASH LEASE BASIS" or a "SHARE LEASE BASIS". The information in both of these standards is based on normal and typical operating procedures and what the expense, income and net is to the land. The "CASH LEASE BASIS" uses the indicated dollar per acre amount for a specific use then totals all income then subtracts all expenses to arrive at the net income divided by the State set cap rate to calculate the ag value. The "SHARE LEASE BASIS" is calculated using actual production, income, and expense data from local producers based on a land owner leasing his land for crop production for a percentage return from the crop. The information necessary to calculate these values can come the CAD Ag Advisory Committee, the local County Agent, the local FSA office, the local USDA office, the USDA National Agricultural Statistics Services, area service contractors and CAD Operator Surveys. The central element of Ag Values is that they represent what the land would sell for if sold "ONLY" for its capacity to produce an income.

Column "1" is the year

Column "2" equals Census acreage

Column "3" equals total square feet arrived at by multiplying total acreage by square feet in an AC

Column "4" equals the length of one side assuming the land is square arrived at by getting the square root of Column "3"

Column "5" equals total linear feet of fencing required to fence the perimeter with three shared sides and one cross fence

Column "6" equals construction cost per linear foot to fence

Column "7" equals total cost arrived at by multiplying total linear feet by construction cost

Column "8" equals cost per acre per year arrived at by dividing Column "7" by Column "2" divided by thirty-five year expected life
